35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

Claims 14-66 are rejected under 35 U.S.C. § 101 because the claimed invention is directed to non-statutory subject matter.

No patentable weight is given to a composition of matter because this composition of matter, which comprises a population of multiply charged ions consisting of a plurality of subpopulations derived from a sample substantially made of a polyatomic parent molecular species, is a chemical compound. Therefore, the composition of matter is considered as an intermediate product to make other compounds, without regard for the usefulness of latter compounds. Such an intermediate product is not considered to be patentably significant, See "intermediate," In re Joly et al., 153 U.S.P.Q. 45 (C.C.P.A. 1967) and In re Kirk et al., 153 U.S.P.Q. 48 (C.C.P.A. 1967).

Response to the amendment filed on October 15, 1993

The rejection applied to claims 14-66 under 35 U.S.C.§ 102

(b) being clearly anticipated and inherent from Fenn et al. is now withdrawn because applicant's remarks rebutting this rejection has been found to be persuasive; in that the population of multiply charged ions which consists a plurality of subpopulations are not inherent from the teaching of the prior art.

The claims 14-66 are now rejected as non-statutory subject matter under 35 U.S.C. § 101, see the rejection above.
